Brain Networks, Prediction, Attention, and Agency

Across

3. Movement can involve automatic or focused
forms of this

4. Three-letter scan used to study brain structure

6. A loud one can steal the spotlight

8. Unwelcome body signal that grabs attention

10. Sense of making an action happen

11. To direct attention toward one thing

14. Message sent between the body and brain

15. Shaking that may change during another
task

16. Difficult
experience, not an FND requirement

18. Brain's spotlight, sometimes stolen by noise

21. Describes evidence gathered by the senses

26. Sensing and interpreting signals inside the body

27. A break that may help manage daily demands

28. Its beat provides internal body signals

29. Changing this may change a movement

30. A
scientific explanation being tested

Down

1. Attack often involving sudden intense fear

2. Brain's best guess about what's coming

3. Messenger used alongside electrical activity

5. What a weak leg may struggle to do

7. Brain areas don't work solo; they're a...

9. Movement control without step-by-step planning

12. Functional event involving altered awareness or movement

13. Brain ability that may slip out of reach

14. Examination finding supporting an FND diagnosis

17. The brain borrows experience from here

19. Team of brain areas sharing information

20. Organ whose regions
form networks

22. Pattern of beats examined in tremor

23. May accompany functional seizures or panic

24. Where interoception gets its signals

25. An event
that may start symptoms but is not a proven cause
