When the Familiar Explanation Doesn't Quite Fit

Across

3. Something
observed or measured during an examination.

5. Measurements
or observations collected as evidence.

9. What a
medical test result might mean.

11. Evidence
strong enough to settle a claim.

13. Force
of blood pushing against artery walls.

15. Get
onto your feet, not for applause.

17. A
question worth asking, no search engine required.

19. Connected
to the question being investigated.

20. Find a
quantity using a tool.

21. Examine
a possibility rather than assume.

22. A clear
difference between two experiences.

23. Be
present together, as two health conditions can.

Down

1. A
diagnosis that doesn't explain every new symptom.

2. Past
health details relevant to assessment.

4. Feeling
close to blacking out.

6. A
suspicion that still needs evidence.

7. Individual
actions that make up a follow-up plan.

8. Another
appointment, not just a cliffhanger.

10. A spell
of symptoms with a beginning and end.

12. A
pressure reading can be high or ___.

14. Offer
comfort, as in 'Don't worry.'

16. One
test's view of a moment, not the whole movie.

18. A
number from a cuff, not a book.

22. What an
investigation seeks beyond the symptom.
